MEDICAL PRESCRIPTION

Patient Information					
Name:	Muhammad Azan	**Age:**	21	**Gender:**	male
Date:	March 09, 2026				

Diagnosis

Acute Viral Respiratory Infection (likely viral pharyngitis or influenza)

Medications

Medicine Name	Dosage & Route	Frequency & Duration	Refills	Special Instructions
Paracetamol (Acetaminophen)	500mg orally	Every 4-6 hours as needed for fever and headache, for a maximum of 5 days	None	Take with food to minimize gastrointe stinal upset
Pseudoephedrine	30mg orally	Every 4-6 hours as needed for nasal congestion, for a maximum of 5 days	None	Avoid taking with other stimulants or before bedtime
Dextromethorphan	10mg orally	Every 4-6 hours as needed for cough, for a maximum of 5 days	None	Avoid taking with other central nervous system depressants

Non-Pharmacological Recommendations

- Stay hydrated by drinking plenty of fluids (water, clear broths, electrolyte-rich beverages like sports drinks).
- Rest to help your body fight off the infection.
- Use a humidifier to relieve congestion and cough.
- Practice good hygiene (frequent hand washing, avoid close contact with others) to prevent the spread of infection.
- Avoid smoking and secondhand smoke exposure.

Medical Tests Recommended

- Rapid Influenza Diagnostic Test (RIDT) if influenza is suspected based on clinical presentation and epidemiological context.
- Complete Blood Count (CBC) if symptoms worsen or do not improve with treatment, to rule out bacterial infection.

• *Reasoning: The patient's symptoms of constant sneezing, fever, headache, and cough, following a long bus trip, are suggestive of an acute viral respiratory infection. The medications prescribed aim to alleviate symptoms (fever reduction, decongestant, and cough suppression) without targeting a specific virus, as antiviral therapy is not indicated for all viral infections and the diagnosis does not specify a particular viral etiology that would require such treatment. The non-pharmacological recommendations support the body's immune response and prevent the spread of infection.
